

## Government-related (re)insurance business

Hannover Re has been involved in a variety of government-related (re)insurance business projects. We design schemes, provide structural support and of course assumes significant risk.

### Agricultural risks

Our internationally orientated team covers the full range of agricultural risks including crop production, livestock, bloodstock, forestry, greenhouse and aquaculture business. A large number of existing crop MPCI, livestock and (index-based) microinsurance programmes underpin our experience. Our territorial scope includes Africa, Asia and Latin America. This will help us to design, structure and facilitate new programmes in order to help you to meet future challenges.

### Government health schemes

We design, implement and manage mass health schemes. This creates efficiencies which translate into lower insurance premium and/or extended coverage and benefits to policyholders. In close cooperation with governments, semi-government organisations or World Bank and related institutions we have come up with business solutions and are successfully running a large range of schemes. Our offer includes scheme design, advisory assistance, claims control and fraud mitigation systems, training, monitoring and last – but not least – reinsurance capacity.

### Pool business

We have a strong involvement in pool business on a worldwide basis. This covers not only property related risks like wind, earthquake or flood but also medical or liability driven pools. Specialty risks like terror and nuclear are well covered. We provide significant reinsurance capacity, offer structured reinsurance solutions including self-financing elements and facilitate the transfer of risks to capital markets either in form of catastrophe bonds or collateralised reinsurance. Thus we are able to offer the full range of solutions in order to meet your specific demands in order to generate as much capacity as possible.
